

## AAR – DOING AFTERMARKET RIGHT WORLDWIDE

AAR is an independent provider of aviation services to commercial and government customers in more than 100 countries. As an aftermarket expert, we leverage our award-winning MRO expertise, parts supply experience, global warehouse network, and seamless digital platforms to create custom solutions. As a public company that has been in business for more than 60 years, AAR has the financial stability to invest on our customers behalf and is still nimble enough to adjust to their needs.

With over 5,000 employees in 20 countries, AAR has the global reach to rapidly respond to the dynamic needs of commercial and regional airlines and cargo carriers, original equipment manufacturers, maintenance providers and governments – all while maintaining the highest levels of quality, safety and service.

### Aviation Services

AAR combines its diverse supply chain, maintenance, engineering and technical capabilities to provide customized, integrated solutions that lower costs, increase asset availability and ensure the highest levels of quality.

Key capabilities include:

- Supply chain and logistics
- Airplane and engine parts supply
- Aircraft maintenance and modifications
- Landing gear, wheels and brakes
- Component repair and management
- OEM aftermarket solutions

From its roots as a leading commercial aviation aftermarket supplier, AAR grew to become the third largest MRO in the world, as well as the Top Airframe MRO Worldwide by ATE&M. The company now provides flight-hour component support for a total of more than 1400 aircraft worldwide.

Additionally, AAR maintains one of the industry's largest and most complete inventory of airframe parts — stocking new and serviceable components for virtually every commercial aircraft type. And AAR now partners with OEMs to help distribute and sell their factory-new parts to the worldwide aftermarket.

### Expeditionary Services

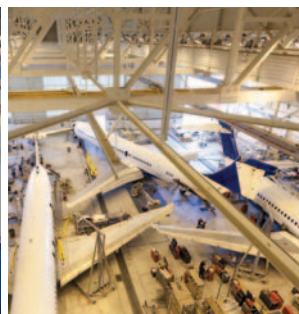

AAR also provides services to support government, military and humanitarian missions and expeditions. AAR provides airlift service to government and defense customers around the world with its own fleet of fixed and rotary-wing aircraft. AAR provides search and rescue in the Falkland Islands for the UK Ministry of Defense.

AAR designs and manufactures products, services and structural components with a range of benefits in support of commercial aviation and defense industries. These include the manufacturing and design for composite flat panels, interiors and aerostructures; and for command and control systems that merge data from multiple sources into actionable information and can be integrated into vehicles, shelters or hard-fixed facilities.

Key capabilities include:

- Mobility systems
- Expeditionary airlift
- Composite fabrication
- Containers & pallets
- Integrated command & control communications (C4)

As aircraft operators, manufacturers and government customers continually find it necessary to do more with less, AAR is by their side – delivering customer value, with efficient and effective services and technologies – from a strong, proven and trusted partner.
