
CHEMICALS & MACHINERY PTE LTD

Since 1974, Chemicals and Machinery has prided itself as a premier speciality chemical & equipment supplier in Singapore. Our late founder, Mr Kwan Fook Ngah always believed in building strong relationships with clients and brand partners as they are the foundation of what we do. 44 years on, we are a distributor of more than 30 quality brands with more than 300 products to cater to a wide range of industries including the burgeoning Aerospace sector in Singapore.

So What Do We Offer?

Surface finishing has been our expertise for many decades. We have a suite of electroplating chemistries that are RoHS compliant and their quality will definitely fulfil our clients' exacting demands. For every product that we have, we ensure that the quality has been tested and years of healthy track records with regards to performance are shown before we are confident to distribute and service. Some of the chemistries in which we provide include:

- Hard Chrome Plating
- Nickel-Chrome Plating
- Anodizing for Aerospace applications
- Aluminium Chromating
- Precious metal Plating
- Electroless / Electrolytic Nickel Plating
- Phosphating
- Cadmium Plating
- Anti-Tarnish Coating

In addition, with the protection of our environment becoming increasingly important to ensure a healthier population and a more sustainable world, we have been relentless in our pursuit for finding ways that we can implement newer and better ways of doing things. One of the key areas of which we have identified is in the areas of precision cleaning during the production of aerospace components. In many instances, solvent based chemicals are seen to be the most effective solution in removing surface impurities such as machining oils and dust. However, the waste treatment processes are usually expensive and the impact on human health in the long term leaves much to be desired. Therefore, the introduction of our range of Swiss made, water-based cleaning and water treatment chemicals are able to solve the draconian way of surface preparation processes.

With the products being homologated for Aerospace usage and in compliance with both RoHS and REACH, we truly believe this is the next step to ensure a cost effective and ethical way of production!

Finally, at the heart of our company lies our people. We firmly believe that in order to give our clients and brand partners an edge in the industry, great service is key to that goal. With constant stock monitoring and management, we are able to deliver to your procurement needs to ensure that your production stays on schedule. Also, troubleshooting and aftersales care comes with all our products to ensure a peace of mind.

Focus on your business, let us handle the rest.
