

CYIENT

Cyient (Estd: 1991, NSE: CYIENT) provides engineering, manufacturing, geospatial, network, and operations management services to global industry leaders. Relationships lie at the heart of how we work. With over 14,000 employees in 21 countries, we partner with clients to operate as part of their extended team, in ways that best suit their organization's culture and requirements. We leverage the power of digital technology and advanced analytics capabilities, along with domain knowledge and technical expertise, to solve complex business problems. Cyient takes solution ownership across the value chain to help our clients focus on their core, innovate, and stay ahead of the curve.

We are a global Design-Build-Maintain partner helping to transform the A&D product lifecycle. Our end-to-end solutions for commercial and defense programs range from engineering design, manufacturing, testing and certification, aftermarket, digital transformation and data analytics. We support product segments such as aero engines, structures, avionics, aero systems, and interiors – to bring greater efficiencies and help deliver faster time-to-market.

Cyient is a recognized global leader and shared innovation partner for design, build and maintain services in the aerospace and defense industry. Our reliable and cost-effective product lifecycle services combine global expertise with local interface – supporting our customers to increase their revenue, profitability and competitive advantage.

Cyient Singapore Private Limited provides aftermarket solutions for airlines, OEMs, engine centres and repair business units. We develop new repair engineering processes meeting customer-specific MRO/aftermarket requirements – enabling customers to increase revenue, profitability, and gain competitive advantage. Our core capabilities in Singapore include:

- Repair feasibility study
- Dimensional stack-up analysis
- Metallurgical support for repairs
- Design & development of repair schemes for commercial engine components
- Design & development of Cleaning, Inspection and Repair (CIR) schemes
- Answering airline technical queries
- Support engine overhaul centre/repair units' operational needs
- Developing repairs related to engineering changes for Operational Commercial Engines (OCE)
- Supporting scrap avoidance value engineering clinics
- Reverse engineering
- Research & Development (R&D) on new repairs
- Federal Aviation Authority (FAA) repair substantiation
- Restore parts to the original type design configuration without affecting airworthiness
- CIR procedures for components
- Re-establish fits/clearances, structural integrity, gas path performance to restore part life
- Obsolescence management
- Retrofitting
- Supply chain optimization
